

Nook

Project Documentation & Functional Guide

Version 1.0 · Functional Specification & User Manual

Nook team, 29 / 04 / 2026

1. Project Overview

The Mission

Nook acts as a trust-bridge in the rental market. In our local context, young people often face rejection from landlords, leading to wasted time and uncomfortable interactions. Nook facilitates transparency by allowing landlords to pre-set their rental criteria (e.g., "accepts young renters") and allowing users to filter listings accordingly — eliminating unnecessary friction.

2. System Architecture

Frontend

React / Next.js / TypeScript

Backend

Python / Django / Ninja

Security

Mandatory Authentication — all routes protected

Real-time

Reservations updated live to prevent double-booking

3. Functional Specifications & User Workflow

3.1 Authentication

The platform is fully private. Users must authenticate before accessing any content.

- **Sign In / Sign Up:**
- Access point for new and returning users. Users enter their email address and password to log in.
- **Forgot Password:** Secure password recovery via email or SMS link.

3.2 The Dashboard (Home Page)

Once logged in, the user arrives at the central hub of the Nook experience.

- **Suggested Nooks:** A personalized property feed filtered by the user's selected Wilaya.
- **Quick Status Widgets:**
 - **My Nooks:** View the status of your own properties (Available / Reserved).
 - **Reservations:** Track incoming and outgoing booking requests.
 - **Favorites:** Quick access to your saved / hearted properties.

3.3 Search & Discovery — Find Rentals

Users can search and filter available properties based on their specific needs and profile.

How Search Works

Type a location or Wilaya name in the search bar and choose a category (Apartment, Villa, or Chalet). The system automatically filters out properties that don't match your renter profile — for example, if a landlord has marked their property as 'No Young Renters', that listing is hidden or clearly flagged so you never waste time on a dead end.

- **Category Selector:** Filter by category: Apartment, Villa, Chalet.
- **Location Filter:** Filter by Wilaya / city to see only local listings.
- **Smart Filtering:** Properties incompatible with your renter profile are automatically hidden or flagged.
- **Result Cards:** Each result card shows: property photo, name, Wilaya, price per night, and average star rating.

3.4 Property Listing & Reservation (Post Page)

When a user taps on a listing card, they see the full property detail page with all the information needed to make a decision and book instantly.

⚡ Instant Booking — No Approval Needed

When you tap BOOK, your reservation is confirmed immediately. There is no waiting period and no request sent to the landlord for approval. The dates are blocked in real time and the property is marked as Reserved the moment you complete the booking.

★ Rating System

After a completed stay, guests can leave two independent ratings directly from the Post Page:

Rate the Nook 🏠 ★★★★★ <i>Tap a star to rate</i>	What you're rating: • Cleanliness & condition of the property • Accuracy of photos and description • Value for money • Overall comfort
Rate the Host 👤 ★★★★★ <i>Tap a star to rate</i>	What you're rating: • Reliability and punctuality • Communication quality • Respect for property rules • Overall behaviour

Ratings are visible on the user's public profile and contribute to their Landlord/Renter Trust Score. Both ratings are independent — you can rate the house without rating the host and vice versa.

📄 Property Details Displayed

- **Photos:** Full photo gallery with 'Show all pictures' button.
- **Specs:** Title, property type (Apartment/Villa/Chalet), number of bedrooms, beds, and bathrooms.
- **Price:** Price per night in DA.
- **Rules:** Smoking, Animals, Noise rules clearly marked with ✓ or X.
- **Categories:** Accepted guest categories: Family, Single, Couple.
- **Trust:** Landlord's Youth-Friendly status.
- **Booking Panel:** Arrival date, departure date, number of visitors, and one-tap BOOK button.

3.5 The "My Nooks" Module — Post a New Listing

This is where landlords manage their rental portfolio and post new properties.

The screenshot shows the 'Post a new nook' interface. On the left is a photo gallery with a placeholder 'Click here to upload up to 10 images'. The main form area contains several sections: 'Type' with buttons for Apartment, Villa, and Chalet; 'Location' with a text field for a Google Maps link and a location pin icon; 'Categories' with buttons for Family, Single, and Couple; 'Rules' with buttons for Animals, Smoking, and Noise; 'Number of' with buttons for Bedrooms, Beds, and Bathrooms; and 'Features' with a grid of buttons for various amenities like Pool, Wifi, Heating, Television, Kitchen, Microwave, Dishes, Freezer, Stove, Oven, Fridge, Washing machine, Cleaning product, Air conditioning, Parking, and Sea view. At the bottom is a large text area for 'write a description of your nook' and a 'Post your nook' button.

- **Add Photos:** Upload up to 10 property photos. Photos appear first on the listing page.
- **Type:** Select Apartment, Villa, or Chalet.
- **Location:** Paste a Google Maps link or use the location pin to set the exact address.
- **Price per Night:** DA price charged to renters per night.
- **Categories:** Set who is welcome: Family, Single, Couple.
- **Rules:** Toggle on/off: Animals, Smoking, Noise.
- **Features:** Tick all applicable amenities from the full feature list.
- **Description:** Write a description to give renters extra context about your property.

3.6 User Profile & Reputation

Transparency is at the heart of the Nook experience. Every user has a public profile that builds trust over time.

- **Total Nooks:** Total number of properties listed.
- **Active Reservations:** Number of active reservations (incoming and outgoing).
- **Rating / Reviews:** Star rating and written reviews from previous renters or landlords.
- **Landlord Trust Score:** A calculated trust score reflecting reliability and history on the platform.

3.7 Settings

 Account Edit email, phone number, and bio	 Security Change password anytime
 Logout Secure exit from the application	

4. FAQ & Troubleshooting

Q: Do I need to wait for the owner's confirmation after booking?

A: No. On Nook, all bookings are instant. Once you click "**BOOK**", the dates are blocked immediately, and the property is marked as reserved without any landlord approval required.

Q: How do I pay the rent on Nook?

A: Payment is handled **hand-to-hand** directly between the renter and the landlord. This is why providing an email and phone number is mandatory : these details allow both parties to coordinate and meet in person to finalize the transaction after the instant booking is confirmed.

Q: I forgot my password. How do I get back into my account?

A: On the login screen, use the "**Forgot Password**" option. We will send a secure recovery link to your email or via SMS to help you reset it.

Q: Do I have to rate both the house and the host?

A: No. The ratings are independent. After your stay, you can choose to rate just the **Nook** (cleanliness, comfort), just the **Host** (communication, reliability), or both.

Q: Can I change my personal information?

A: Yes. Within the **Account Settings**, you can update your email, phone number, and bio at any time to keep your profile current.
